579 MH Mobile Home Nozzle

A	HOLLOW-CONE Type A-nozzles are mainly used on burners with a hollow cone air pattern and for through puts up to 2.00 GPH. The droplet distribution is concentrated on the outside of the cone and results in good ignition and low-noise combustion.
B	SOLID-CONE Type B-nozzles produce a spray that distributes droplets fairly uniformly throughout the complete pattern. The spray pattern becomes progressively more hollow at higher flow rates, particularly above 8.00 GPH. Provides smooth ignition and efficient combustion, particularly in larger burners.
W	Type W " ALL PURPOSE "-nozzles are neither truly hollow nor solid. These nozzles frequently can be used in place of either solid or hollow cone nozzles between 0.40 and 8.00 GPH, regardless of the burner's air pattern. The lower flow rates tend to be more solid.
AR-D	Type AR-D Nozzles are of a "solid cone" type similar to Type B but with a slightly lower concentration of the droplets in the center of the cone. They are high performance in burners of low up to medium capacity (up to flows of 2.00 GPH).
R-D	Type R-D Nozzles have a high concentration of droplets in the center of the spray cone. They are particularly recommended for burners with a highly concentrated solid air pattern. The average droplet size is slightly coarser than on the Standard Solid Cone Type B.
MH	Type .579 MH Mobile Home Nozzles are low-capacity nozzles designed for mobile home use. This design will minimize the usual plugging problems associated with low flow rates.
SS	Semi-Solid nozzle (.50-2.00) 600, 700 and 800 spray angles; interchanges with other SS nozzles.

BECKETT CONNECTED WIFI TANK GAUGE

TGG PART #	PRODUCT DESCRIPTION
BEC7651A0001K	BeckettLink Connected WiFi Tank Gauge Kit
BEC7651GU	Replacement Gasket Kit F/BeckettLink Gauge
BEC7651A0001U	BeckettLink Tank Gauge Only

Beckett Introduces the BeckettLink® Connected Tank Gauge System

Today's Need: To remain efficient and improve fuel routing, dealers need an accurate, reliable way to track customer fuel usage while preventing fuel run-outs and maximizing the amount of fuel delivered. With the growing use of heat pumps, mini splits, and other secondary heat sources, degree-day calculations have become increasingly problematic and inefficient.

BeckettLink Dealer Dashboard

Combines all customers' gauges on one easy-to-use interface program and is compatible with **CARGAS**

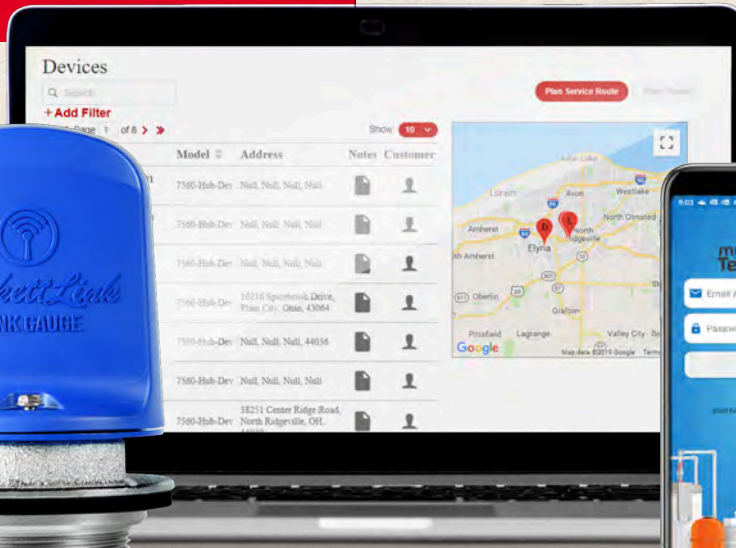

BeckettLink WiFi Hub

Connects current and future BeckettLink devices to the cloud.

BeckettLink Tank Gauge

Provides a reliable connection with a range of 150'+ and a 10-year estimated battery life.

myTechnician™ Mobile Application

Monitors fuel tank levels and allows customers to track fuel usage and get notified when it's time to fill up.

Beckett Solution: Monitor all linked customer fuel levels with the BeckettLink Tank Gauge System.

This system posts tank data to the cloud, making fuel data available to dealers through their BeckettLink Dealer Dashboard as well as to their customers using the myTechnician™ mobile application. The BeckettLink Tank Gauge System consists of four major components: Connected Tank Gauge, WiFi Hub, myTechnician™ mobile app, and Dealer Dashboard.

OURS IS A STORY OF GENERATIONAL STRENGTH AND OVERWHELMING SUPPORT FOR CUSTOMERS AND FIELD TECHNICIANS THROUGH DEPENDABLE PRODUCTS, SERVICE, AND TRAINING TO EARN YOUR TRUST. WE MANUFACTURE RELIABLE AND WELL-ENGINEERED PRODUCTS BASED ON OVER 80 YEARS OF INDUSTRY KNOWLEDGE.
